BANQUET HALL BOOKING SYSTEM

Smart Venue Reservation & Event Management Platform

Phase 1 — Introduction	Project Type: Web Application | Domain: Event Management

1.1 Project Overview

The Banquet Hall Booking System is a comprehensive digital platform designed to streamline the end-to-end process of reserving and managing banquet venues. It bridges the gap between venue providers and event organizers by offering real-time availability checks, transparent pricing, and seamless coordination tools.

This system caters to multiple event types including weddings, corporate events, birthday parties, anniversaries, and social gatherings. The platform is accessible via a web and mobile interface, ensuring convenience for all stakeholders.

Key Stakeholders

Clients / Event Organizers	Venue Managers	System Administrators
Search, compare, and book banquet halls online with real-time availability.	Manage listings, track bookings, handle payments, and communicate with clients.	Oversee platform health, manage users, and maintain system integrity.

1.2 Purpose of this Document

The purpose of this document is to serve as a complete technical and functional reference for the Banquet Hall Booking System. It covers all phases from ideation to deployment, including system design, requirements, architecture, and testing.

Document Scope

Phase 1:	Introduction — Project overview, purpose, stakeholders, and document structure.
Phase 2:	Ideation — Problem statements, empathy map, and brainstorming sessions.
Phase 3:	Requirement Analysis — Customer journey, solution requirements, DFD, technology stack.
Phase 4:	Project Design — Problem-solution fit, proposed solution, and architecture.
Phase 5:	Project Planning — Sprint breakdown, Gantt-style schedule, and milestone tracking.
Phase 6:	Testing — Functional, performance, security, and usability test results.
Phase 7:	Results — UI screenshots, outcomes, and user acceptance testing summary.
Phase 8:	Advantages & Disadvantages — Balanced evaluation of the system.
Phase 9:	Conclusion — Project outcome summary and key learnings.
Phase 10:	Future Scope — Planned enhancements and roadmap for next releases.
Phase 11:	Appendix — Source code structure, project links, and references.
